

## BIOGRAPHY

Frank W. Neuber III

Technical Business Development Manager – Americas

Clariant Corporation, BU Additives & Adsorbants, Downstream Plastics Segment

About the author: Frank Neuber began his career in polymer additives as an analytical chemist well over thirty years ago at the MA Hanna (now part of Avient) Corporate Technical Center in Coral Springs, Florida. Analyses led to de-formulating, formulating, process engineering, technical support and ultimately technical business development, after working with clients for so many years.

After designing Hanna's new analytical lab for the transfer of the Coral Springs, FL facility to Suwanee, GA and managing the lab projects, he was offered the opportunity to manage the lab and pilot line at Bayshore Industrial (now owned by Ingenia Co.) in LaPorte, Texas. For the past 22 years, he has worked for Clariant Corporation, with 16 years at Clariant Masterbatches (now Avient) in various developmental, technical service and managerial roles, and the last 6 years with Clariant Corporation's Clariant Adsorbants & Additives division.

He has been enjoying the last 6 years re-uniting with old friends, colleagues, and even former competitors, supporting Clariant Adsorbant & Additives growth as the Technical Business Development Manager-Americas-Downstream Plastics Applications, along with his work with the Clariant teams in Europe and Asia, developing new products and finding new ways to improve polymer processing. He is especially proud to be a part of Clariant's introduction of the new, fully sustainable Licocene® and Licocare® RBW Vita products for dispersion, metal release, polymer nucleation and flow modification.
