

Edward Gay
Krauss Maffei Corporation

Edward Gay is the Director of Process Technology for the Extrusion Division of Krauss Maffei Corporation, a global leader in plastics process systems. Currently, he leads the Innovation Center and coordinates support of customers through lab trials, commissions, process design, and process troubleshooting. His areas of expertise include polymer processing for various technical platforms such as adhesives, batch to continuous, compounding and recycling. He has commissioned multiple lab and production lines ranging from 22.5 to 8,000 kg/h.

Prior to Krauss Maffei, Edward was employed as a Research and Development Chemist within the specialty coating industry. Within his role, he utilized co-rotating twin screw extruders as continuous emulsification reactors for product development and commercialization. He has multiple patents for processes and products which employ extruded emulsions for use in various markets.
